

Title: "Production System"

Abstract: (no Fig.)

The invention refers to a production system, in particular machining line, which is formed, on the one hand, by one or more process modules which machine on work pieces and, on the other hand, is at least formed by one logistics module, and the logistics module provides a conveying of the work pieces, wherein the logistics module as a pre-assembled system module provides with and disposes of work pieces to a number of process modules, and the process module as system module can be connected to the logistics module.
